

Enzyme Peeling Cream 50ml

Brand: Fleur De Mer

Price: \$71.00

Short Description

Moisturises and exfoliates even sensitive skin to look younger and more beautiful with clearer skin

Description

ENZYME PEELING

from Australia

...an enzyme alternative to AHA's for gentler skin peeling

What is Enzyme Peeling

This Australian Enzyme Peeling Treatment represents international, dynamic technology. Unlike other enzymes which have a limited life and are very unstable these products require no refrigeration, have a 2 year shelf life and bring true Enzyme Peeling technology into the home. These Enzyme Peels very gently remove the very outer or dead skin layer of the epidermis (skin) revealing a layer of fresh, lovely and more youthful looking skin. And they cause no damage to the skin at all. This means that people with sensitive skin can easily tolerate Enzyme Therapy even though they are unable to tolerate AHA's, BHA's or Retinoids. It is a slightly slower treatment but people usually prefer safety to speed. This is because these products have the unique ability to work at a neutral pH and are no more aggressive than water

What Enzyme Peeling can do for the skin ...

- Once the top layer of unattractive dead skin cells is removed a fresh and lovely

skin is revealed

- The appearance of fine lines, wrinkles etc is reduced
- Uneven pigmentation is lightened
- Rough, scaly skin is softened and smoothed
- Acne scarring is refined, pimples reduced
- Follicles and pores are cleansed
- A more youthful looking skin soon becomes very noticeable
- The more you continue usage the greater the improvement in the look of the skin.

KEY INGREDIENTS

Papain - (Mask and Cream): which comes from the unripe papaya fruit is linked with Papain Carbomer and then covalently immobilised to Polyacrylic Acid. This helps to 'anchor' the enzyme to the surface of the skin, increase its stability and produce even more effective skin peeling.

Retinyl Palmitate – (Mask): Vitamin A derivative to revitalize skin.

Horse Chestnut – (Mask): Clarifies skin by gently stimulating the circulation. Obtained from the seed or fruit of the plant.

Wheat Germ Oil – (Mask and Cream): anti-oxidant and nourishing.

Sorbitol – (Cream): Keeps skin well hydrated.

Apricot and Macadamia Oils – (Cream): Natural nourishing oils.

ENZYME PEELING PRODUCTS

Enzyme Peeling Gel Mask 250gm (ref 8074). This is a highly concentrated mask and usually applied in beauty salons as a booster to ensure quicker results.

Enzyme Peeling Cream 50gm (ref 745). This is a slightly less concentrated cream which is taken home and applied twice daily to a perfectly cleansed skin morning and last thing at night. This will ensure that the enzymes keep working on the skin and removing nothing more than those unwanted dead skin cells.

APPLICATION

All skin types

Thoroughly cleanse face and neck, and apply eye pads over the eyes

Using a soft brush apply an even layer of Enzyme Peeling Gel Mask to the face and neck.

Leave for 15 minutes

Rinse with warm water and sponges

Moisturise with Enzyme Peeling Cream and inform your customer to use it twice daily at home in the mornings and last thing at night after thorough cleansing

Apply a Sunblock 30+ and inform your customer to use it every day.

A light scrub twice weekly with Cleansing Granules will enhance the effect.
